State Individual Income Tax Comparisons for Tax Year 2007 and Computed Tax Liabilities for Tax Year 2009

South Carolina and 40 other states impose an individual income tax. Most states use federal adjusted gross income as their base for calculating taxes. Many states, like South Carolina, allow taxpayers to subtract itemized or standard deductions and personal exemptions to determine taxable income. The amount of the exemptions and deductions, if allowed, vary greatly and are documented for each state in this analysis. Two states, New Hampshire and Tennessee, tax only dividend and interest income. Seven states, AK, FL, NV, SD, TX, WA, and WY, do not impose an individual income tax.

This report analyzes the amount of individual income tax revenue collected by the federal and state governments and the characteristics of the states' tax policies that determine the magnitude of their revenue collections. Table 1 contains comparisons of average taxable incomes and income distributions among states for 2007, as reported by the Internal Revenue Service. Table 2 contains comparisons of individual income tax collections for South Carolina taxpayers relative to the other states. Table 3 indicates the amount of state individual income tax liability owed by a single taxpayer and a married couple filing jointly with two children for adjusted gross incomes of \$10,000 to \$1,000,000 for each state using the latest available tax rates for tax year 2009.

State tax forms used by taxpayers to determine estimated quarterly income tax declarations for 2009, or the actual income tax returns for 2009, when available, were the source for the deductions, exemptions, and tax brackets for each state. In the state summary pages, the report lists the standard deductions, personal exemptions, tax brackets, and other deductions and credits allowed by the states. Since tax returns for 2009 are generally not available at this time, we are unable to determine if any of the other deductions or credits were modified after 2008.

- Table 1, on pages 1 through 5, compares distributions of filers according to various levels of federal adjusted gross income for all 50 states. Details on taxable income, itemized deductions, state and federal taxes paid, and the distribution of returns by amount of AGI are also presented. The distribution of income reported on federal tax returns indicates that South Carolina ranks 5th in the percentage of taxpayers reporting less than \$50,000 of AGI. Only four other states reported a higher percentage of returns in this income category.
- Table 2, on pages 6 through 10, reports state income tax collections from FY 2005-06 and compares these collections to the total amount of federal adjusted gross income from Table 1, line 2. This percentage reported in Table 2 on line 5 is the average effective tax rate by state. This average effective rate is calculated as the amount of

state income tax paid as a percentage of federal adjusted gross income. South Carolina's individual income tax collections of \$2,727,251,000 in FY 2005-06 (Table 2, line 2 on page 6) divided by the \$98,961,892,000 in total federal adjusted gross income (Table 1, line 2 on page 1) results in a 2.8% average effective tax rate. Ranking from the highest average effective tax rate, South Carolina ranks 34th out of the 41 states imposing an individual income tax. The highest average effective tax rate was 5.7% in Oregon and the lowest was North Dakota at 1.8%.

- These calculations indicate that of the 41 states imposing an individual income tax, only 7 states' tax collections are a smaller percentage of adjusted gross income than South Carolina's 2.8% effective tax rate.
- South Carolina's average effective tax rate is lower than some states that impose flat taxes at rates well below South Carolina's highest marginal rate of 7%. CO imposes a 4.64% flat tax on taxable income, but its average effective tax rate is also 2.8%, which ranks them 32nd. IN, with a flat tax of 3.4%, MA at 5.3%, PA at 3.07%, and UT at 5% all have average effective tax rates higher than South Carolina, while imposing a flat rate well below South Carolina's highest marginal rate of 7%.
- Hawaii and Oregon impose the highest marginal tax rate among the 41 states at 11%. Hawaii's rate kicks in at \$200,000 in taxable income for singles and \$400,000 for joint filers. OR's top rate applies to income above \$250,000 for singles and \$500,000 for married taxpayers. A total of thirteen states impose a maximum marginal rate that exceeds South Carolina's 7% top marginal rate. These are NC, CA, HI, ID, IA, ME, NM, NJ, NY, OR, RI, VT, and WI. Two states, Arkansas and Montana, have the same top rate as South Carolina. Twenty-five states impose a maximum marginal rate that is lower than South Carolina's rate. These are GA, AL, AZ, CO, CT, DE, IL, IN, KS, KY, LA, MD, MA, MI, MS, MO, NE, NM, ND, OH, OK, PA, VT, VA, and WV.
- Several states with maximum marginal rates below South Carolina's 7% tax bracket impose higher average effective rates on taxpayers than South Carolina. These include GA at 6%, AL at 5%, CT at 5%, KY at 6%, MS at 5%, MO at 6%, OH at 5.92%, OK at 5.5%, VA at 5.75%, and WV at 6.5%. This result occurs because of differences in the personal exemptions, standard deductions, and tax bracket income ranges. For example, a married taxpayer with 2 children does not owe any income tax on the first \$26,000 in gross income in South Carolina because of the standard deduction and personal exemptions allowed.
- In addition to comparing effective tax rates among states in Table 2, we also compare each state's overall tax structure for a range of incomes. In Table 3, pages 11 through

15, we compute the tax liability for a family of four and a single taxpayer with incomes of \$10,000 to \$1,000,000 for all 41 states that impose an income tax.

- South Carolina's standard deductions, personal exemptions, and tax rates generally impose a lower tax on families than other states, especially for taxpayers with income under \$50,000. Twenty-nine states impose taxes that are higher than South Carolina's for a family of four with gross income between \$10,000 and \$50,000. Nine states impose a tax that is higher than South Carolina's at all levels of income between \$10,000 and \$1,000,000 for married taxpayers with two children.
- The comparison for single taxpayers is not as favorable. Four states impose a tax on single taxpayers that is higher than South Carolina's at all levels of income between \$10,000 and \$1,000,000. In South Carolina, the smaller standard deduction and reduced number of personal exemptions for single taxpayers increases their taxable income and tax liability.
- Local taxes are excluded in our computation of tax liabilities. Fourteen states have counties or cities that impose a separate income tax. These states are: AL, AR, DE, IN, IA, KY, MD, MI, MO, NJ, NY, OH, OR, and PA.
- South Carolina, along with 10 other states, annually adjusts its tax brackets for inflation. The 10 other states are: AR, CA, ID, IA, MN, MT, OR, RI, VT, and WI.
- South Carolina conforms to the federal standard deductions and personal exemptions. These subtractions from AGI are indexed for inflation annually. Nine other states have a similar tax policy. These are CO, ID, MN, MO, NE, NM, ND, RI, and VT.
- Seven other states also adjust their standard deductions and personal exemptions, but they differ from the federal amounts. These are AR, CA, IA, KY, ME, MT, and OR.
- South Carolina and 10 other states do not adjust their brackets for married filers. This can result in a marriage penalty compared to single taxpayers. The other 10 states are: AR, DE, IA, KY, MS, MO, MT, OH, VA, and WV.
- Eleven states double the bracket widths for joint filers, AL, AZ, CA, CT, HI, ID, KS, LA, ME, NE, and OR effectively eliminating the marriage penalty.
- The remaining 19 states either impose a flat tax, increase but don't double the width of the brackets, or allow married taxpayers to file separately to partially mitigate the marriage penalty.

Data on State deductions, exemptions, and tax brackets are from the states' individual income tax forms and instructions. Alabama: Standard deductions decline from the maximum value as AGI increases. California: Personal exemption credits are reduced by \$6 or \$12 for each \$2,500 that AGI exceeds \$163,187 or \$326,379 for single or married taxpayers, respectively. See attached State Sheet for additional details.

Connecticut: Standard deductions are phased out to \$0 for singles at \$38,000 and \$71,000 for MFJ. Personal exemptions are a tax credit of up to 75% of tax due declining to no credit at \$56,000 AGI for single filers and above \$100,500 for MFJ.

Data on State deductions, exemptions, and tax brackets are from the states' individual income tax forms and instructions.

Maryland: The standard deduction is 15% of AGI. Minimum and maximum amounts for the different filing status are provided above. Maryland taxpayers' personal exemptions are reduced to a minimum of \$600 as AGI increases, see attached state sheet for additional detail.

Montana: The standard deduction is 20% of AGI. The minimum and maximum amounts are provided above.

Nebraska: For AGI above \$166,800 an additional tax is imposed which minimizes the benefits of the lower marginal tax brackets.

Data on State deductions, exemptions, and tax brackets are from the states' individual income tax forms and instructions.

Utah: A credit is allowed based on 6% of the taxpayers federal deductions. Credit is phased-out at higher incomes. See state page for details.

Wisconsin: Standard deduction for single taxpayer is \$9,440. Above \$13,610 of income the deduction is reduced by 12% for each dollar over \$13,610. When the single taxpayers' income reaches \$92,277, the standard deduction is reduced to \$0. The standard deduction for married taxpayers is \$17,010 with a 19.778% phase out for income over \$19,100. When the married taxpayers' income reaches \$105,105, the standard deduction is reduced to \$0.

This box indicates where the comparison State's individual income tax is lower than SC's at the same AGI level.

If no box is shown in the column, then the state's individual income tax is always higher than SC's.

State Notes

SC: A \$210 two-wage earner credit adjusted for income levels is calculated for married taxpayers with incomes above \$30,000.

NC: Taxpayers receive a \$60 credit for dependents if income levels fall below \$100,000 for married filers and \$60,000 for single.

AL: Standard deduction is 20% of AGI to a max. of \$2,500 for single filers and \$7,500 for married filing jointly filers.

This box indicates where the comparison State's individual income tax is lower than SC's at the same AGI level.
If no box is shown in the column, then the state's individual income tax is always higher than SC's.

State Notes

NY: Taxpayers with AGI >\$150K lose the benefits of the lower tax brackets.
